

WING ANGLE MEASUREMENT GAUGES

Use these paper gauges to accurately measure the amount of wing angle on your fin. Use scissors to carefully cut around the gauges, then use hole punch to make holes in the large end of each gauge. Use a key chain, string or rubber band to keep all the gauges together. Use the spacers if measuring a wing mounted deep on the fin.

How to Use

1. Loosen wing screws.
2. Place desired wing angle gauge against the fin, in between ski bottom and wing, and adjust the wing until the proper angle is obtained. Use spacers if fin is mounted deep on fin.
3. Tighten wing screws.
